

Mastering the Basics of Pneumatics

Learn Key Concepts and Techniques

TRI-PHASE
AUTOMATION

FESTO

Join us on **June 5th** for an engaging training session from **9 AM to 12 PM** or **1 PM to 4 PM**, where you will learn the basics of air-driven technology. This course is perfect for anyone looking to deepen their understanding of pneumatic systems, whether you're a beginner or want to refresh your knowledge. With a strong emphasis on practical applications and core concepts, this training will equip you with essential skills in pneumatics.

As part of this training, you will gain insights into:

- Introduction to air preparation
- Basics of air distribution
- Types of threads and their appropriate uses
- Basic valve terminology
- And much more

The cost to attend is **\$100**, making it a valuable investment in your professional development. Plus, following the training, you'll receive a free trial of Festo FluidSIM! Don't miss this opportunity to enhance your expertise in pneumatic technology!

John is an Application Engineer with Festo Corporation, concentrating mainly on the Food and Packaging industry. He has 29 years of experience in the industry, with 10 years at Festo. As an Application Engineer John works with customers to solve automation challenges. Part of this problem-solving process is teaching customers how to use products properly and in the most efficient manner. Being involved with newcomers to the automation world is the best opportunity to make a significant impact.
